to Article 29 of the Regulation (EU)
No 305/2011 of the European
Parliament and of the Council of 9
March 2011

MEMBER OF EOTA

European Technical Assessment ETA-10/0189 of 2022/08/25

I General Part

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S

Trade name of the construction product:

Knapp Clip Connectors and hold downs
Type GIGANT 120, 150 and 180,
Type RICON 40/40, 66/16, 60/30, 60/40, 70/20, 80/30,
80/40, 100/25, 100/30, 100/40, 120/25, 120/30,
120/40, 140/25, 140/30, 140/40, 160/25, 160/30 and
160/40,
Type RICON S 60/140, 60/170, 60/200, 60/230,
80/200, 80/230, 80/260, 80/290 and 80/390
Type WALCO Z32, Z40, 60/V60, 80/V80 and V80L
Type WALCO L T

Product family to which the above construction product belongs:

Three-dimensional nailing plate (concealed beam hangers)

Manufacturer:

Knapp GmbH
Wassergasse 31
A-3324 Euratsfeld
Tel.: +43 (0) 7474 79910-0
Telefax: +43 (0) 7474 79910-99
Internet: www.knapp-verbinder.com

Manufacturing plant:

Knapp GmbH
Wassergasse 31
A-3324 Euratsfeld

This European Technical Assessment contains:

250 pages including 4 annexes which form an integral part of the document

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:

EAD 130186-00-0603, Three Dimensional Nailing Plates.

This version replaces:

The previous ETA with the same number issued on 2022-05-08

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product

Technical description of the product

Knapp Clip Connectors GIGANT, RICON, RICON S and WALCO V and hold downs WALCO L T are two-piece (GIGANT, RICON, RICON S, and WALCO V with base plate and WALCO L T) or one-piece (WALCO V with collar screw) non-welded, face-fixed connectors to be used in timber to timber connections as well as connections between a timber and a steel member or timber and concrete member. RICON S can also be welded.

The clip connectors are made from pre-galvanized steel grade DD13 according to EN 10111:2008-06 with minimum yield strength R_e of 235 MPa or corrosion resistant steel castings GX5CrNi 19-10 according to EN 10283:2010-06 with minimum yield strength R_e of 175 MPa. The hold-downs are made from pre-galvanized steel grade S235 JR according to EN 10025-2:2004.

Dimensions, hole positions and typical installations are shown in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The connectors are intended for use in making end-grain to side-grain connections, end-grain to end-grain and side-grain to side-grain connections in load bearing timber structures, as a connection between a wood based joist and a solid timber (softwood or hardwood) or wood based header, where requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirements 1 and 4 of Regulation (EU) 305/2011 shall be fulfilled. They are also intended for use in making an end-grain or side-grain connection between a timber joist and a steel member or concrete.

The connectors can be installed as connections between wood based members such as:

- Structural solid timber of soft- or hardwood according to EN 338 / EN 14081,
- Glulam made of soft- or hardwood, classified according to EN 1194 / EN 14080, or with ETA or national approval
- LVL according to EN 14374 or ETA
- Parallam PSL,

- Intrallam LSL,
- Duo- and Triobalken,
- Cross laminated timber and similar structural glued products according to EN16351 or ETA.
- Engineered wood products and solid wood panels according to EN13986 or ETA, the provisions of the ETA of the engineered wood product apply
- Engineered wood products according to ETA if the ETA of the product includes provisions for the use of self-tapping screws, the provisions of the ETA of the engineered wood product apply.
- SWISS KRONO Magnum Board according to ETA-13/0784 (only WALCO V80 Clip Connectors)

However, the calculation methods are only allowed for a characteristic wood density of up to 500 kg/m³ for softwood and 590 kg/m³ for hardwood. Even though the wood based material may have a larger density, this must not be used in the formulas for the load-carrying capacities of the fasteners.

Where an interlayer made of wood-based panel is placed between the Knapp Clip Connector and the header, the influence of the interlayer on the load-carrying-capacity of the header fasteners has to be taken into account.

Annex B states the formulas for the characteristic load-carrying capacities of the connections. The design of the connections shall be in accordance with Eurocode 5 or a similar national Timber Code.

It is assumed that the forces acting on the connection are the following F_1 , F_2 , F_3 and F_{45} . The force F_1 acts perpendicular to the clip connector plate, F_2 and F_3 shall act in the middle of the clip connector in or against the direction of insertion. The force F_{45} is assumed to act with an eccentricity e_{45} with regard to the centre of gravity of the screws in the clip connector plate. In end-grain to side-grain it is assumed that the forces are acting right at the end of the joist.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the concealed beam hangers of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

It is assumed that the header beam is prevented from rotating. Similarly, it is assumed that the steel member to which the connector is bolted does not rotate. If the header beam only has installed a connector on one side the eccentricity moment $M_v = F_d \times (b_H/2 + e)$ shall be considered where b_H is the header width. The same applies when the header has connections on both sides, but with vertical forces which differ more than 20%.

It is a condition for a force F_1 , F_2 , F_3 and F_{45} that the connector plate is connected to a wood-based member with screws in all holes marked.

The connectors are intended for use in connections subject to static or quasi static loading. The zinc-coated connectors are for use in timber structures subject to dry, internal conditions defined by the service classes 1 and 2 of EN 1995-1-1, (Eurocode 5). The stainless steel connectors are for use in timber structures subject to conditions defined by the service classes 1, 2 and 3 of EN 1995-1-1:2008, (Eurocode 5). The fasteners (screws and bolts) to be used shall be made from suitable material.

KNAPP clip connectors with $\geq 60 \mu\text{m}$ zinc-coating and screws with $\geq 15 \mu\text{m}$ zinc-coating are intended to be used for concealed connections in climatic conditions equivalent to swimming pool facilities with fresh water (this use does not apply to facilities with mineral or brine baths).

Details of the corrosion protection system are deposited at ETA-Danmark.

The scope of the brackets regarding resistance to corrosion shall be defined according to national provisions that apply at the installation site considering environmental conditions.

3 Performance of the product and references to the methods used for its assessment

Characteristic	Assessment of characteristic
3.1 Mechanical resistance and stability*) (BWR1)	
Joint Strength - Characteristic load-carrying capacity	See Annex B
Joint Stiffness	See Annex B
Joint ductility	No performance assessed
Resistance to seismic actions	No performance assessed
Resistance to corrosion and deterioration	See section 3.6
3.2 Safety in case of fire (BWR2)	
Reaction to fire	The concealed beam hangers are made from steel classified as Euroclass A1 in accordance with EN 13501-1 and Commission Delegated Regulation 2016/364
3.3 General aspects related to the performance of the product	The concealed beam hangers have been assessed as having satisfactory durability and serviceability when used in timber structures using the timber species described in Eurocode 5 and subject to the conditions defined by service class 1, 2 and 3
Identification	See Annex A

*) See additional information in section 3.4 – 359.

3.4 Methods of verification

The characteristic load-carrying capacities are based on the characteristic values of the connectors and the steel plates.

According to EN 1990 (Eurocode – Basis of design) paragraph 6.3.5 the design value of load-carrying capacity can be determined by reducing the characteristic values of the load-carrying capacity with different partial factors.

Therefore, to obtain design values according to the Eurocodes or appropriate national codes of practice, the capacities have to be multiplied with different partial factors for the material properties and – for the connectors mounted in wood – also the coefficient k_{mod} that takes into account the load duration class.

Thus, the characteristic or design values of the load-carrying capacity are determined also for timber failure $F_{Rk,H}$ (obtaining the embedment strength of connectors subjected to shear or the withdrawal capacity of the most loaded connector, respectively (see Annex B) as well as for steel plate failure $F_{KCC,Rd}$. The design value of the load-carrying capacity is the smaller value of both load-carrying capacities.

$$F_{Rd} = \min \left\{ \frac{k_{mod} \cdot F_{Rk,H}}{\gamma_{M,H}}; F_{KCC,Rd} \right\}$$

Therefore, for timber failure the load duration class and the service class are included. The different partial factors γ_M for steel or timber, respectively, are also correctly taken into account.

3.5 Mechanical resistance and stability

See annex B for characteristic load-carrying capacities of the connectors.

The characteristic capacities of the connectors are determined by calculation assisted by testing as described in the EAD 130186-00-0603. They should be used for designs in accordance with Eurocode 5 or a similar national Timber Code.

The design models allow the use of fasteners described in Annex A:

Screws in accordance with EN 14592

In the formulas in Annex B the capacities for self-drilling screws calculated from the formulas of Eurocode 5 are used assuming a thick steel plate when calculating the lateral nail load-carrying-capacity.

Further, the connectors can be fastened to a steel member by bolts with a diameter of 5 to 10 mm in holes with a diameter up to 1 mm larger than the bolt, and to a concrete member by concrete dowels.

No performance has been determined in relation to ductility of a joint under cyclic testing. The contribution to the performance of structures in seismic zones, therefore, has not been assessed.

3.6 Aspects related to the performance of the product

3.6.1 Corrosion protection in service class 1 and 2.

In accordance with EAD 130186-00-0603 the connectors from 5 mm thick mild steel either have a zinc coating weight of min Z275 or an equivalent coating Fe/Zn 12. The steel employed is DD13 according to EN 10111:2008-06 with minimum yield strength R_e of 235 MPa.

3.6.2 Corrosion protection in service class 3.

In accordance with EAD 130186-00-0603 the stainless steel connectors are produced from 5 mm thick corrosion resistant steel castings. The steel employed is GX5CrNi 19- 10 according to EN 10283:2010-06 with minimum yield strength R_e of 175 MPa.

3.7 General aspects related to the fitness for use of the product

Knapp Clip Connectors GIGANT, RICON, RICON S WALCO V WALCO Z32/Z40 and WALCO L/T are manufactured in accordance with the provisions of this European Technical Assessment using the manufacturing processes as identified in the inspection of the plant by the notified inspection body and laid down in the technical documentation.

Connector joints

A connector joint is deemed fit for its intended use provided:

Header – support conditions

- The header beam shall be restrained against rotation and be free from wane under the connector.

If the header carries joists only on one side the eccentricity moment from the joists

$M_{ec} = R_{joist} \times b_H/2$ shall be considered at the strength verification of the header.

R_{joist} Reaction force from the joists

b_H Width of header

- For a header with joists from both sides but with vertical forces which differ more than 20% a similar consideration applies.

Wood to wood connections

- Connectors are fastened to wood-based members by screws or bolts.
- There shall be screws in all marked holes as prescribed in Annex A.
- The characteristic capacity of the connector joint is calculated according to the manufacturer's technical documentation, dated 2009-12-05, 2018-07-26, 2018-11-10, 2019-07-19, 2019-09-05 and 2021-01-25.
- The connector joint is designed in accordance with Eurocode 5 or an appropriate national code.
- There is no gap between the end of the joist and the connector plate or between the header surface and the connector plate.
- For Knapp Clip Connectors the width of the joist shall be at least the minimum width as prescribed in Annex A or D.
- The cross section of the joist at the connector joint shall have sharp edges, it shall be without wane.
- The cross section of the header shall have a plane surface against the whole connector plate.
- The depth of the joist or header shall be so large that the minimum fastener end and edge distances are observed.
- Screws to be used shall have a diameter, which fits the holes of the connector plates.
- The screws may be driven into softwood without predrilling for:
 - RICON (Ø5 mm except RICON 40/40) and RICON S
 - WALCO V60 and WALCO 32 or 40 with partial screw pattern

The screws shall be driven into softwood after pre-drilling:

- RICON (Ø8 mm) and RICON 40/40
- WALCO V80 and WALCO Z32 or Z40 with full screw pattern
- GIGANT

The screws shall be driven into hardwood after pre-drilling.

The drill hole diameters are:

Outer thread diameter	Drill hole diameter	
	Softwood	Hardwood
5,0	3,0	3,5
6,0	4,0	4,0
8,0	5,0	6,0
10,0	6,0	7,0
KS12x60	8,0	9,0
KS16x60	12,0	13,0

Wood to steel and wood to concrete

The above mentioned rules for wood to wood connections are applicable also for the connection between the joist and the steel-header or concrete-header.

- The connector joint is designed in accordance with Eurocodes 2, 3, 5 or 9 or an appropriate national code.
- The connector plate shall be in close contact with the steel or concrete over the whole face. There shall be no intermediate layers in between, except static calculations are made for the interlayer.
- The bolt shall have a diameter not less than the hole diameter minus 2 mm.
- The bolts shall be placed symmetrically about the vertical symmetry line. The number of bolts shall equal the number of the respective screws in the joist.
- Concrete bolts shall be in accordance with an ETA

4 Attestation and verification of constancy of performance (AVCP)

4.1 AVCP system

According to the decision 97/638/EC of the European Commission¹, as amended, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 2+.

5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark prior to CE marking

Issued in Copenhagen on 2022-08-25 by

Thomas Bruun
Managing Director, ETA-Danmark

Table of contents of ETA-10/0189:

Annex A

Pages	Connector + Accessoires
10 - 14	GIGANT connector plates, screws and clip locks
15 - 50	RICON carbon/stainless steel connector plates, screws, locking clip, connecting nuts, insert screws and reinforcing plates
51 - 82	RICON S connector plates, screws, collar bolts, clip locks
83 - 107	WALCO V connector plates, screws and collar screws, collar bolts and clip locks
108 - 110	WALCO Z32 / WALCO Z40 connector plates and screws
111 - 134	WALCO L T connector plates, screws and nails

Annex B

Pages	Design values of load-carrying- capacities (Formulas for the load directions)
135 - 142	B.1 Design capacities of timber-to-timber connector joints (load direction F_1 , F_{23} , F_{45})
143	B.2 Design capacities of connector joints with bolts or metal anchors
144	B.3 Connection stiffness (K_{ser} values)

Annex C

Pages	Tables with loads and form factors
145 - 146	Table C1: Characteristic capacities $F_{KCC,Rk}$, form factors k_H , dimensions a_c , a_1 , a_2 and numbers n_{45} for GIGANT, RICON, RICON S, WALCO V connectors
146	Table C2: WALCO Z32 / WALCO Z40: Characteristic capacities $F_{1,Rk}$ for timber member C24 and higher
146	Table C3: WALCO Z32 / WALCO Z40: Characteristic capacities $F_{2,Rk}$ for timber member C24 and higher
146	Table C4: WALCO Z32 / WALCO Z40: Characteristic capacities $F_{45,Rk}$ for timber member C24 and higher

Annex D

Pages	Installation of connectors
147 - 151	GIGANT: Header – joist connection
152 - 188	RICON: Header – joist connections / post – beam connections
189 - 222	RICON S: Header – joist connections / post – beam connections
223 - 237	WALCO V: Wall connections
238 - 250	WALCO Z32 / WALCO Z40: Wall connections

Annex A

Product details and definitions

KNAPP® Clip Connector GIGANT 120/40

6.0 mm thick steel, grade DD13 according to EN 10111, with yield strength R_e of 235 MPa.

Pre-galvanized steel plate with coating Fe/Zn 12

Without clip lock

3 screws in header (side grain) using hole pattern 1, with KNAPP® SK 10x80 or 10x120

3 screws in end grain using hole pattern 1, with KNAPP® SK 10x120 or SK 10x200

With clip lock

3 screws in header (side grain) using hole pattern 1 with KNAPP® SK 10x80 or 10x120

3 screws in end grain using hole pattern 1 with KNAPP® SK 10x120 or SK 10x200

4 screws in header (side grain) using hole pattern 1 and 2 with KNAPP® SK 10x80 or 10x120
4 screws in end grain using hole pattern 1 and 3 with KNAPP® SK 10x120 or SK 10x200

KNAPP® Clip Connector GIGANT 180/40

6.0 mm thick steel, grade DD13 according to EN 10111, with yield strength R_e of 235 MPa.
Pre-galvanized steel plate with coating Fe/Zn 12

Without clip lock

6 screws in header (side grain) using hole pattern 1 and 2 with KNAPP® SK 10x80 or 10x120
6 screws in end grain using hole pattern 1 and 2 with KNAPP® SK 10x120 or SK 10x200

With clip lock

6 screws in header (side grain) using hole pattern 1 and 2 with KNAPP® SK 10x80 or 10x120
5 screws in end grain using hole pattern 1 and 3 with KNAPP® SK 10x120 or SK 10x200

KNAPP® GIGANT clip lock

2.0 mm thick steel grade S500MC according to EN 10149-2: with yield strength R_e of 500 MPa, tensile strength R_m of 580 MPa, maximum tensile strength R_m of 700 and ultimate strain A80 of 6%
Corrosion protection by pre-galvanizing, chromate conversion coating, and sealing according to specifications on file at ETA Denmark

dimensions in mm

KNAPP® GIGANT screw SK 10x80, SK 10x120, SK 10x200

Screws according to EN 14592 manufactured of carbon steel, tension $f_{tens,k}$ of 32 kN, torque $M_{t,u,k}$ of 45 Nm, yield moment M_{yk} of 35 kNm and corrosion protection according to Eurocode 5;

KNAPP® RICON® connection nut M5 for RICON® 60/40 DA

Steel grade 11SMnPb30 according to EN 10087 or EN 10277-3 with yield strength R_{eH} of 440 MPa, tensile strength R_m of 560 MPa, maximum tensile strength R_m of 810 and ultimate strain A80 of 6%;
Corrosion protection according to Eurocode 5 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® RICON® connection nut M8 for RICON® DA

Steel grade 11SMnPb30 according to EN 10087 or EN 10277-3 with yield strength R_{eH} of 440 MPa, tensile strength R_m of 560 MPa, maximum tensile strength R_m of 810 and ultimate strain A80 of 6%;
Corrosion protection according to Eurocode 5 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® RICON® 40 Locking clip

2.0 mm thick stainless steel wire grade X10CrNi18-8 according to EN 10088-1 with tensile strength R_m of 1700 MPa and tensile strength R_m of 1950 MPa

KNAPP® RICON® 30 Locking clip

2.0 mm thick stainless steel wire grade X10CrNi 18-8 (AISI 302, material No. 1.4310) according to EN 10088-1 with tensile strength R_m of 1700 MPa and tensile strength R_m of 1950 MPa

(Header/column: CS 10x100; Joist CS 10x200 or CS 10x300)

Oblique holes: 29, 30

(Header CS $\geq 10 \times 400$; Joist CS $\geq 10 \times 450$)

Screws in Column:

Pattern 1: 1, 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 23, 25;

Pattern 2: 1, 2, 4, 6, 8, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28;

KNAPP® RICON® S 390x80 additional plate (ZP) 80x50x25

Additional plate of steel grade S235JR+AR according to EN 10025-2/2004 with minimum yield strength R_{eH} of 225 MPa, minimum tensile strength R_m of 360 MPa, maximum tensile strength R_m of 510 and minimum ultimate strain A_{80} of 26/24%

Corrosion protection according to Eurocode 5-1-1

dimensions in mm

KNAPP® Clip Connector RICON® S 60 / RICON® S 80

Alternative screw position for uppest two screws (holes in red color):

RICON® S 60

RICON® S 80:

KNAPP® RICON® S 60 collar bolt D12

Collar bolt of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and ultimate strain A_{80} of 7%;
Corrosion protection according to Eurocode 5-1-1 ($\geq 5 \mu\text{m}$ zinc coating)

KNAPP® RICON® S 60 welded collar bolt D12 and for WALCO 60

Collar bolt of steel grade 16MnCr5 according to EN 10084 with HBW values 156 – 207
Corrosion protection according to Eurocode 5-1-1;

KNAPP® RICON® S 80 collar bolt D16

Collar bolt of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 MPa and ultimate strain A_{80} of 7%;
Corrosion protection according to Eurocode 5-1-1 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® RICON® S 60 press nut M12 as retaining screw collar bolt M12

Press nut of pre-galvanized steel grade C45Pb according to EN 10277-2 with minimum yield strength $R_{p0,2}$ of 410 MPa, tensile strength R_m of 650 MPa, maximum tensile strength R_m of 1000 MPa and ultimate strain A_{80} of 7%. Corrosion protection according to Eurocode 5-1-1 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® RICON® S 80 press nut M16 as retaining screw collar bolt M16

Press nut of pre-galvanized steel grade C45Pb according to EN 10277-2 with minimum yield strength $R_{p0.2}$ of 410 MPa, tensile strength R_m of 650 MPa, maximum tensile strength R_m of 1000 MPa and ultimate strain A_{80} of 7%. Corrosion protection according to Eurocode 5-1-1 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® RICON® S 60 spring retaining screw collar bolt M12

Collar bolt and locknut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1; pressure spring of unalloyed spring steel with specification SM according to EN 10270-1, tensile strength R_m of 1900 MPa, maximum tensile strength R_m of 2160 and ultimate strain A_{80} of 40%;

KNAPP® RICON® S 80 spring retaining screw collar bolt M16

Collar bolt and locknut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1; pressure spring of unalloyed spring steel with specification SM according to EN 10270-1, tensile strength R_m of 1900 MPa, maximum tensile strength R_m of 2160 MPa and ultimate strain A_{80} of 40%;

KNAPP® RICON® S 60 retaining screw collar bolt M12**with insert screw or long nut
with press nut or nut M12**

Retaining screw bolt, locknut and longnut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 MPa and ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1.

The material properties of the press nut M12 is defined on page 54. The steel grade of the nut M12 is 8 (acc. to EN ISO 898-1; EN ISO 4032); the nut M12 can be fixed by a welding point or similar method (e.g. with adhesive) to avoid turning at the assembly process.

**1:1**

dimensions in mm

KNAPP® RICON® S 80 retaining screw collar bolt M16**with insert screw or long nut
with press nut or nut M16**

Retaining screw bolt, locknut and longnut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 MPa and minimum ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1

The material properties of the press nut M16 is defined on page 55. The steel grade of the nut M16 is 8 (acc. to EN ISO 898-1; EN ISO 4032); the nut M16 can be fixed by a welding point or similar method (e.g. with adhesive) to avoid turning at the assembly process.

KNAPP® RICON® S 60 clip lock

2.0 mm thick stainless steel grade X10CrNi 18-8 (AISI 302, material No. 1.4310) according to EN 17224-2:1995-11 with minimum tensile strength R_m of 1200 MPa

M12 threaded sleeve of pre-galvanized steel grade 16MnCrS5 according to EN 10277-4 with HBW values 156 - 20

Corrosion protection according to Eurocode 5-1-1

Corrosion protection according to Eurocode 5-1-1

KNAPP® WALCO® V threaded sleeve for WALCO 80 base plate

M16 threaded sleeve of pre-galvanized steel grade 16MnCrS5 according to EN 10277-4 with HBW values 156 - 207

Corrosion protection according to Eurocode 5-1-1 (>5mm zinc coating)

KNAPP® Clip Connector WALCO® 80 VS base plate

5.0 mm thick steel grade DD13 according to EN 10111:2008-06 with minimum yield strength Re of 235 MPa; Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® 80 M16 welded

5.0 mm thick steel grade DD13 according to EN 10111:2008-06 with minimum yield strength Re of 235 MPa;

M12 threaded sleeve of pre-galvanized steel grade 16MnCrS5 according to EN 10277-4 with HBW values 156 - 20

Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® 80 VS

5.0 mm thick steel grade DD13 according to EN 10111:2008-06 with minimum yield strength Re of 235 MPa;

Collar bolt of steel grade 16 MnCr5 according to EN 10084 with HBW values 156-207

Corrosion protection according to Eurocode 5-1-1

WALCO® V 80 oblong hole base plate

5.0 mm thick steel grade DD13 according to EN 10111:2008-06 with minimum yield strength Re of 235 MPa; Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® V collar screw KS 12x60

Screws according to EN 14592 with tensile capacity $R_{t,u,k}$ of 29 kN; corrosion protection according to Eurocode 5;

KNAPP® Clip Connector WALCO® V collar screw KS 16x60

Screws according to EN 14592 with tensile capacity $R_{t,u,k}$ of 48 kN; corrosion protection according to Eurocode 5 ($\geq 5 \mu\text{m}$ zinc coating);

KNAPP® WALCO® V 60 collar bolt D12

Collar bolt of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and minimum ultimate strain A80 of 7%; corrosion protection according to Eurocode 5-1-1

KNAPP® WALCO® V 80 double collar bolt D16 *)

Collar bolt of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and minimum ultimate strain A_{80} of 7%;
Corrosion protection according to Eurocode 5-1-1

*) KNAPP® WALCO® V60 double collar bolt D12 is in principal similar as the given drawing

KNAPP® WALCO® V 60 spring retaining screw collar bolt M12

Collar bolt and locknut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1; pressure spring of unalloyed spring steel with specification SM according to EN 10270-1, tensile strength R_m of 1900 MPa, maximum tensile strength R_m of 2160 and ultimate strain A_{80} of 40%;

KNAPP® WALCO® V 80 spring retaining screw collar bolt M16

Collar bolt and locknut of pre-galvanized steel grade 11SMnPb30 according to EN 10277-3 with yield strength R_{eH} of 410 MPa, tensile strength R_m of 490 MPa, maximum tensile strength R_m of 760 and ultimate strain A_{80} of 7%; counter sink screw of pre-galvanized steel grade 8.8 according to EN ISO 898-1; pressure spring of unalloyed spring steel with specification SM according to EN 10270-1, tensile strength R_m of 1900 MPa, maximum tensile strength R_m of 2160 and minimum ultimate strain A_{80} of 40%;

KNAPP® WALCO® V 60 retaining screw collar bolt M12

Retaining screw bolt, lock nut and insert of pre-galvanized steel grade according to EN ISO 898-1; counter sink screw and lock nut of pre-galvanized steel grade 8.8 according to EN ISO 898-1;
Corrosion protection according to Eurocode 5-1-1

KNAPP® WALCO® V 80 retaining screw collar bolt M16

Retaining screw bolt, lock nut and insert of pre-galvanized steel grade according to EN ISO 898-2; counter sink screw and lock nut of pre-galvanized steel grade 8.8 according to EN ISO 898-1;
Corrosion protection according to Eurocode 5-1-1

Technical drawing of a Knappe Walco V 60 handle. The drawing includes a top view, a side view, and a detail view of the handle's end.

Top View Dimensions:

- Overall width: $60 \pm 0,2$ mm
- Overall height: $70 \pm 0,2$ mm
- Distance from top edge to top of handle cutout: 12 mm
- Distance from left edge to left of handle cutout: 36 mm
- Radius of top corners: $R 7,5$
- Radius of handle cutout corners: $R 2$
- Distance from top edge to bottom of handle cutout: 4 mm
- Distance from left edge to left of handle cutout: 14 mm
- Distance from left edge to right of handle cutout: 25 mm
- Distance from left edge to right of handle cutout: 27 mm
- Distance from left edge to center of bottom-left hole: 7,5 mm
- Distance from left edge to center of bottom-middle hole: 22,5 mm
- Distance from left edge to center of bottom-right hole: 22,5 mm
- Distance from left edge to center of bottom-most hole: 7,5 mm
- Hole diameter: $\phi 6,2$
- Distance from top edge to center of top-left hole: 40 mm
- Distance from top edge to center of top-middle hole: 22,5 mm
- Distance from top edge to center of top-right hole: 22,5 mm
- Distance from top edge to center of top-most hole: 7,5 mm

Side View Dimensions:

- Thickness: $6 \pm 0,2$ mm

Detail View Dimensions:

- Angle: 157°
- Thickness: 1 mm
- Distance from center to edge: $5 \pm 0,2$ mm

KNAPP ●
WALCO V 60

KNAPP® WALCO® V 80 clip lock

1.0 mm thick stainless steel grade X5CrNi18-10 material number 1.4301 according to EN 10151 with tensile strength R_m of 1100 MPa)

KNAPP® WALCO® V PH screw 6x50, 6x80

Screws according to EN 14592 manufactured of carbon steel, tension $f_{tens,k}$ of 10,5 kN and torque $M_{t,u,k}$ of 10,5 Nm; corrosion protection according to Eurocode 5-1-1;

L	50 – 1,5	80 – 3,0
b	45 -1,0	76 -1,0

KNAPP® WALCO® V PH screw 10x50, 10x60, 10x100

Screws according to EN 14592 manufactured of carbon steel, tension $f_{tens,k}$ of 24 kN and torque $M_{t,u,k}$ of 40 Nm; corrosion protection according to Eurocode 5-1-1;

L	50 – 1,5	60 – 1,5	100 – 3,5
b	40 ±1,0	50 ±1,0	90 ±1,0

KNAPP® WALCO® V PH screw 10x80, 10x120

Screws according to EN 14592 manufactured of carbon steel, tension $f_{tens,k}$ of 24 kN and torque $M_{t,u,k}$ of 40 Nm; corrosion protection according to Eurocode 5-1-1;

L	$80 \pm 3,5$	$120 \pm 3,5$
b	$54 \pm 2,0$	$84 \pm 2,0$

KNAPP® Clip Connector WALCO® Z32

6.0 mm thick steel, grade DD13 according to EN 10111, with yield strength R_e of 235 MPa.
Pre-galvanized steel plate with coating Zn5C

dimensions in mm

dimensions in mm

KNAPP® WALCO Z40 screw SK 10x60, SK10x80, SK 10x120

Screws according to EN 14592 manufactured of carbon steel, tension $f_{tens,k}$ of 30 kN, torque $M_{t,u,k}$ of 30Nm and corrosion protection according to Eurocode 5

KNAPP® Clip Connector WALCO® L / T steel plate 525x200x3

3.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225 - 235 MPa; tensile strength R_m of 360-510 MPa
Corrosion protection according to Eurocode 5-1-1

dimensions in mm

**KNAPP® Clip Connector WALCO® L / T steel plate 525x200x3
for mounting on the inside**

3.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225 - 235 MPa; tensile strength R_m of 360-510 MPa
Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® L floor angle 200x4
KNAPP® Clip Connector WALCO® T floor angle 420x4

4.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225 - 235 MPa; tensile strength R_m of 360-510 MPa
 Corrosion protection according to Eurocode 5-1-1

dimensions in mm

**KNAPP® Clip Connector WALCO® L floor angle 200x4
for on site assembly**

4.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225-235 MPa; tensile strength R_m of 360-510 MPa
Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® T floor angle 420x4
for on site assembly

4.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225-235 MPa; tensile strength R_m of 360-510 MPa
Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® L pressure plate 200x10 mm
KNAPP® Clip Connector WALCO® T pressure plate 420x10 mm

10.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225 - 235 MPa; tensile strength R_m of 360-510 MPa

Corrosion protection according to Eurocode 5-1-1

KNAPP® Clip Connector WALCO® L pressure plate 200x10 mm
KNAPP® Clip Connector WALCO® T pressure plate 420x10 mm
for on site assembly

10.0 mm thick steel grade S235 JR + N according to EN 10025-2 with yield strength R_e of 225-235 MPa; tensile strength R_m of 360-510 MPa
Corrosion protection according to Eurocode 5-1-1

KNAPP® WALCO® Hexagon screw M8x25 with confederation

Self-tapping screw with taptite 2000 thread hexagone head with collar and hexaloburar drive.

Thread type x nominal diameter (d_1)	M8
Length (l_1)	25 mm
Collar diameter (d_2)	17.9 mm
Head height (k_1)	8.1 mm
External drive (s_1)	WS13
Internal drive	TXP45
Guideline values for hole diameters	7.4 mm
Material	Steel
Property class	10.9
Surface	Flake zinc silver
RoHS-compliant	Yes
Corrosion protection period	480 h
Head type	Hexagon head
Drive type	Hexagon
Thread type	Metric thread
Collar/flange	Yes

KNAPP® WALCO® L 6,3x22 and 6,3x25 Hexagon washer head drilling screws with tapping screw thread

6,3x 22 mm hexagon washer screw of pre-galvanized steel grade according to DIN EN ISO 15480:2019 with torque $M_{t,u,k}$ of 21,0 Nm and characteristic shear load $F_{b,Rk} = 11,0$ kN
The screw dimensions are according to EN ISO 15480.

6,3x 25 mm hexagon washer screw of pre-galvanized steel grade according to DIN EN ISO 15480:2019 with torque $M_{t,u,k}$ of 16,0 Nm and characteristic shear load $F_{b,Rk} = 8,0$ kN
The screw dimensions are according to EN ISO 15480.

Screw dimension according to EN ISO 15480

Annex B

Design values of load-carrying- capacities

B.1 Design capacities of timber-to-timber connector joints.

The downward and the upward directed forces are assumed to act in the middle of the joist. The force F_{45} is assumed to act at a distance e_{45} from the centre of gravity of the fasteners.

Force F_1 for Knapp Clip Connectors GIGANT, RICON (except RICON 40/40) and RICON S:

$$F_{1,Rd} = n_{ef} \cdot \min \{ F_{ax,Rd}; F_{t,Rd}; F_{1,KCC,Rd} \} \quad (B.1.1)$$

Force F_1 for Knapp Clip Connectors WALCO V and RICON 40/40:

$$\text{WALCO V with collar screw: } F_{1,Rd} = \min \{ 2 \cdot F_{ax,Rd}; 2 \cdot F_{t,Rd}; F_{ax,CS,Rd}; F_{1,KCC,Rd} \} \quad (B.1.2a)$$

$$\text{WALCO Z32 and Z40: } F_{1,Rd} \text{ see Table C.2} \quad (B.1.2b)$$

$$\text{WALCO V with base plate and RICON 40/40: } F_{1,Rd} = \min \{ n_{ef} \cdot F_{ax,Rd}; n_{ef} \cdot F_{t,Rd}; F_{1,KCC,Rd} \} \quad (B.1.2c)$$

Force F_1 for Knapp Hold Downs WALCO L T per WALCO L steel plate:

$$F_{1,Rd} = \min \{ 9 \cdot F_{v,Rd}; n_{ef,s1} \cdot F_{v,s1,Rd} \} \quad (B.1.2d)$$

Force F_2 or F_3 for Knapp Clip Connectors GIGANT, RICON (except RICON 40/40) and RICON S:

$$F_{23,Rd} = \min \left\{ \sum_{i=1}^{n_j} F_{v,J,Rd}^i; \frac{1}{\sqrt{\left(\sum_{i=1}^n \frac{n_{ef,H}}{n} F_{v,H,Rd}^i \right)^2 + \left(\frac{1}{k_{H,2}} \cdot F_{ax,H,Rd} \right)^2}}; F_{23,KCC,Rd} \right\} \quad (B.1.3a)$$

Force F_2 for Knapp Clip Connectors RICON 40/40:

$$F_{23,Rd} = \min \left\{ 0,7 \cdot \sum_{i=1}^n F_{v,J,Rd}^i; \frac{0,7}{\sqrt{\left(\sum_{i=1}^n F_{v,H,Rd}^i \right)^2 + \left(\frac{1}{k_{H,2}} \cdot F_{ax,H,Rd} \right)^2}}; F_{23,KCC,Rd} \right\} \quad (B.1.3b)$$

$$F_{v,J,Rd} = \frac{k_{mod}}{\gamma_M} \cdot \min \left\{ \begin{array}{l} f_{h,J,k} \cdot l_{ef,J} \cdot d \\ 2,3 \cdot \sqrt{M_{y,Rk} \cdot f_{h,J,k} \cdot d} + \frac{F_{ax,J,Rk}}{4} \\ f_{h,J,k} \cdot l_{ef,J} \cdot d \cdot \left[\sqrt{2 + \frac{4 \cdot M_{y,Rk}}{f_{h,J,k} \cdot d \cdot l_{ef,J}^2}} - 1 \right] + \frac{F_{ax,J,Rk}}{4} \end{array} \right. \quad (B1.3.1)$$

$F_{ax,J,Rk}$... tensile capacity of screw in the end grain of the joist:

$$F_{ax,J,Rk} = k_{ax} \cdot 0,52 \cdot \sqrt{d} \cdot \ell_{ef}^{0,9} \cdot \rho_k^{0,8} \quad (B.1.3.1a)$$

$$k_{ax} = 1 \text{ for } 45^\circ \leq \alpha \leq 90^\circ;$$

$$k_{ax} = 0,3 + \frac{0,7 \cdot \alpha}{45^\circ} \text{ for } 0^\circ \leq \alpha \leq 45^\circ;$$

$$F_{v,H,Rd} = \frac{k_{mod}}{\gamma_M} \cdot \min \left\{ \begin{array}{l} f_{h,H,k} \cdot l_{ef,H} \cdot d \\ 2,3 \cdot \sqrt{M_{y,Rk} \cdot f_{h,H,k} \cdot d} + \frac{F_{ax,H,Rk}}{4} \\ f_{h,H,k} \cdot l_{ef,H} \cdot d \cdot \left[\sqrt{2 + \frac{4 \cdot M_{y,Rk}}{f_{h,H,k} \cdot d \cdot l_{ef,H}^2}} - 1 \right] + \frac{F_{ax,H,Rk}}{4} \end{array} \right. \quad (B1.3.2)$$

$F_{ax,J,Rk}$... tensile capacity of screw in the side grain of the header:

$$F_{ax,H,Rk} = k_{ax} \cdot 0,52 \cdot \sqrt{d} \cdot \ell_{ef}^{0,9} \cdot \rho_k^{0,8} \text{ for joist (J) or header (H)} \quad (B.1.3.2a)$$

$$k_{ax} = 1 \text{ for } 45^\circ \leq \alpha \leq 90^\circ;$$

$$k_{ax} = 0,3 + \frac{0,7 \cdot \alpha}{45^\circ} \text{ for } 0^\circ \leq \alpha \leq 45^\circ;$$

If the penetration length of the screw in the timber member is at least 100 mm, and the inserted thread length is at least 8d, and the connection is in service class 1 or 2 within a closed building envelope, k_{ax} may be assumed as follows for $0^\circ \leq \alpha \leq 45^\circ$:

$$k_{ax} = 0,6 + \frac{0,4 \cdot \alpha}{45^\circ} \text{ for } 0^\circ \leq \alpha \leq 45^\circ;$$

Only for Knapp Clip Connectors RICON S 390x80 VS + ZP, two additional inclined screws per connector plate may be used for load direction F_2 . In this case, the load-carrying capacity of the inclined screws $F_{2,IS,Rd}$

may be added to $\sum_{i=1}^n F_{v,J,Rd}^i$ or to $\frac{1}{\sqrt{\left(\frac{1}{\sum_{i=1}^n F_{v,H,Rd}^i}\right)^2 + \left(\frac{1}{k_{H,2} \cdot F_{ax,H,Rd}}\right)^2}}$, respectively, but not to $F_{2,KCC,Rd}$.

$$F_{2,IS,Rd} = \frac{k_{mod} \cdot 40,0 \text{ kN}}{\gamma_M} \quad (B.1.3.3)$$

Load capacity $F_{23,Rd}$ for RICON S connections depending on the number of screws.

Table B.1: Max. number of screws n_{max} for RICON S

Knapp Clip Connector in joist or header plate	Max. number of screws n _{max}
RICON S 140x60	10
RICON S 170x60	13
RICON S 200x60	16
RICON S 230x60	19
RICON S 200x80	16
RICON S 230x80	19
RICON S 260x80	22
RICON S 290x80	25
RICON S 390x80	28+2
Knapp Clip Connector in column plate	Max. number of screws n _{max}
RICON S 140x60	8
RICON S 200x60	13
RICON S 200x80	13
RICON S 290x80	20
RICON S 390x80	23+2

Force F₂ or F₃ for Knapp Clip Connectors WALCO V with collar screw:

$$F_{2,Rd} = \min \{ F_{v,CS,Rd} \cdot n \cdot F_{v,Rd}; F_{23,KCC,Rd} \} \quad (B.1.4a)$$

Force F₂ for Knapp Clip Connectors WALCO V with collar screw in SWISS KRONO Magnum board:

$$F_{v,CS,Rd} = (k_{mod}/\gamma_M) \cdot 0,4 \cdot f_{h,k} \cdot l_{ef} \cdot d \quad (B.1.4b)$$

Force F₂ for Knapp Clip Connectors WALCO Z32 and Z40:

$$F_{2,Rd} \text{ see Table C.3} \quad (B.1.4c)$$

Force F₂₃ for Knapp Clip Connectors WALCO V with base plate:

$$F_{23,Rd} = \min \left\{ \frac{1}{\sqrt{\left(\sum_{i=1}^n F_{v,V,Rd}^i \right)^2 + \left(\frac{e \cdot z_{max}}{I_{p,V,ax}} \cdot F_{ax,V,Rd} \right)^2}}; \frac{1}{\sqrt{\left(\sum_{i=1}^n F_{v,BP,Rd}^i \right)^2 + \left(\frac{e \cdot z_{max}}{I_{p,BP,ax}} \cdot F_{ax,BP,Rd} \right)^2}}; F_{23,KCC,Rd} \right\} \quad (B.1.4d)$$

Force F₂₃ for Knapp Hold Downs WALCO L T per WALCO L steel plate:

$$F_{23,Rd} = \min \{ 5 \cdot F_{v,Rd}; n_{ef,s23} \cdot F_{v,s23,Rd} \} \quad (B.1.4e)$$

Force F₄₅ for Knapp Clip Connectors GIGANT, RICON (except RICON 40/40) and RICON S:

$$F_{45,Rd} = \min \left\{ \begin{array}{l} \frac{F_{v,J,Rd}}{\sqrt{\left(\frac{1}{n_{45}} + \frac{e_{J,45}}{a_1}\right)^2 + \left(\frac{e_{J,45}}{a_2}\right)^2}} \\ \frac{F_{v,H,Rd}}{\sqrt{\left(\frac{1}{n_{45}} + \frac{e_{H,45}}{a_1}\right)^2 + \left(\frac{e_{H,45}}{a_2}\right)^2 + \left(\frac{F_{v,H,Rd}}{k_{H,45} \cdot F_{ax,H,Rd}}\right)^2}} \\ F_{45,KCC,Rd} \end{array} \right. \quad (B.1.5a)$$

Force F_{45} for Knapp Clip Connectors RICON 40/40:

$$F_{45,Rd} = F_{23,Rd} \text{ (see equation B.1.3b))} \quad (B.1.5b)$$

An effective number of screws n_{45} is used, for Knapp Clip Connectors RICON (except RICON 40/40) based on the load-carrying capacity of 8 mm screws, see Table C.1. Only for Knapp Clip Connectors RICON, a reinforcing plate may be used. In this case, the load-carrying capacity of the reinforcing plate $F_{45,RC,Rd}$ may be added to $F_{45,Rd}$.

$$F_{45,RC,Rd} = 4,0 \text{ kN} \quad (B.1.6)$$

Force F_{45} for Knapp Clip Connectors WALCO V:

$$\text{WALCO V with collar screw: } F_{45,Rd} = \min \{ F_{v,CS,Rd}; 2 \cdot F_{v,Rd}; F_{45,KCC,Rd} \} \quad (B.1.7a)$$

Force F_{45} for Knapp Clip Connectors WALCO V with collar screw in SWISS KRONO Magnum board:

$$F_{v,CS,Rd} = (k_{mod}/\gamma_M) \cdot 0,4 \cdot f_{h,k} \cdot l_{ef} \cdot d \quad (B.1.7b)$$

$$\text{WALCO 32 and 40: } F_{45,Rd} \text{ see Table C.4} \quad (B.1.7c)$$

$$\text{WALCO V with base plate: } F_{45,Rd} = \min \left\{ \begin{array}{l} \frac{F_{v,V,Rd}}{\sqrt{\left(\frac{1}{n} + \frac{e_{45} \cdot x_{max}}{I_{p,v}}\right)^2 + \left(\frac{e_{45} \cdot y_{max}}{I_{p,v}}\right)^2 + \left(\frac{e \cdot y_{ax,max} \cdot F_{v,V,Rd}}{I_{p,ax} \cdot F_{ax,V,Rd}}\right)^2}} \\ \frac{F_{v,BP,Rd}}{\sqrt{\frac{1}{n^2} + \left(\frac{e \cdot y_{ax,max} \cdot F_{v,BP,Rd}}{I_{p,ax} \cdot F_{ax,BP,Rd}}\right)^2}} \\ F_{45,KCC,Rd} \end{array} \right. \quad (B.1.7d)$$

Force F_4 for Knapp Hold Downs WALCO L T per WALCO L steel plate:

$$F_{4,Rd} = \frac{k_{mod} \cdot 4,5 \text{ kN}}{\gamma_{M,timber}} \quad (B.1.7e)$$

Force F_5 for Knapp Hold Downs WALCO L T per WALCO L steel plate:

$$F_{5,Rd} = \frac{k_{mod} \cdot 12,1 \text{ kN}}{\gamma_{M,timber}} \quad (B.1.7f)$$

Where:

$F_{ax,Rd}$ Design withdrawal capacity of a tensile screw

$$F_{ax,Rd} = \frac{k_{mod}}{\gamma_M} \cdot k_{ax} \cdot 0,52 \cdot \sqrt{d} \cdot \ell_{ef}^{0,9} \cdot \rho_k^{0,8} \quad \text{for softwood timber}$$

$$F_{ax,Rd} = \frac{k_{mod}}{\gamma_M} \cdot f_{ax,k} \cdot d \cdot \ell_{ef} \quad \text{for SWISS KRONO Magnum Board}$$
(B.1.4)

$$k_{ax} = 1 \quad \text{for } 45^\circ \leq \alpha \leq 90^\circ;$$

$$k_{ax} = 0,3 + \frac{0,7 \cdot \alpha}{45^\circ} \quad \text{for } 0^\circ \leq \alpha \leq 45^\circ;$$

If the penetration length of the screw in the timber member is at least 100 mm, and the inserted thread length is at least 8d, and the connection is in service class 1 or 2 within a closed building envelope, k_{ax} may be assumed as follows for $0^\circ \leq \alpha \leq 45^\circ$:

$$k_{ax} = 0,6 + \frac{0,4 \cdot \alpha}{45^\circ} \quad \text{for } 0^\circ \leq \alpha \leq 45^\circ;$$

$$f_{ax,k} = 12 \text{ N / mm}^2 \quad \text{for } \alpha = 0^\circ \text{ and } d = 10 \text{ mm for SWISS KRONO Magnum Board;}$$

$$f_{ax,k} = 16 \text{ N / mm}^2 \quad \text{for } \alpha = 90^\circ \text{ and } d = 10 \text{ mm for SWISS KRONO Magnum Board;}$$

$$F_{ax,CS,Rd} \quad \text{Design withdrawal capacity of a collar screw (WALCO V) according to eq. (B.1.4)}$$

$$f_{ax,k} = 4,75 \text{ N / mm}^2 \quad \text{for } \alpha = 0^\circ \text{ and } d = 16 \text{ mm for SWISS KRONO Magnum Board;}$$

$$f_{ax,k} = 12 \text{ N / mm}^2 \quad \text{for } \alpha = 90^\circ \text{ and } d = 16 \text{ mm for SWISS KRONO Magnum Board;}$$

$$\ell_{ef,CS} \quad 46 \text{ mm (see drawing page 88)}$$

Fig. B.1: Definition of e_1

Combined forces

In case of combined forces, the following inequality shall be fulfilled:

$$\left(\frac{F_{1,Ed}}{F_{1,Rd}} \right)^2 + \left(\frac{F_{23,Ed}}{F_{23,Rd}} \right)^2 + \left(\frac{F_{45,Ed}}{F_{45,Rd}} \right)^2 \leq 1 \quad (B.1.8)$$

B.2 Design capacities of connector joints with bolts or metal anchors

Knapp Clip Connectors:

For connector plates connected to a steel member or to a timber member using bolts or interconnection nuts the assumptions for the calculation of the load-carrying capacity of the connection are:

- The transfer of force from the joist to the connector plate is as for a wood-wood connection, see clause B.1;
- The bolts or interconnection nuts shall always be arranged as the screws they are replacing;
- No washers are required.

The static behaviour is the same as for a wood-wood connection with screws. The bolt capacities replace the respective header screw capacities in equations B.1 to B.7.

Knapp Hold Downs:

The load $F_{B,Ed}$ for the design of a bolt or metal anchor is calculated as:

- Load direction F_1 :**
- $F_{B,t,Ed} = 1,4 \cdot F_{l,Ed}$ for tensile load on each metal anchor for floor angle L 200x4
 - $F_{B,t,Ed} = 0,8 \cdot F_{l,Ed}$ for tensile load on each metal anchor for floor angle L 200x4 for onsite mounting
 - $F_{B,t,Ed} = 2,8 \cdot F_{l,Ed}$ for tensile load on central metal anchor for floor angle T 420x4
 - $F_{B,t,Ed} = 0,8 \cdot F_{l,Ed}$ for tensile load on outer metal anchors for floor angle T 420x4
 - $F_{B,t,Ed} = 1,6 \cdot F_{l,Ed}$ for tensile load on central metal anchor for floor angle T 420x4 for onsite mounting
 - $F_{B,t,Ed} = 0,8 \cdot F_{l,Ed}$ for tensile load on outer metal anchors for floor angle T 420x4 for onsite mounting

Load direction F_{23} :

WALCO floor angle	Load per bolt or metal anchor parallel to bend line $F_{b,v,Ed }$	Load per bolt or metal anchor perpendicular to bend line $F_{b,v,Ed\perp}$
L 200x4	$F_{23,Ed}/2$	$F_{23,Ed}/2$
T 420x4	$F_{23,Ed}/3$	$F_{23,Ed}/4$
L 200x4 onsite	$F_{23,Ed}/2$	$F_{23,Ed}/5$
T 420x4 onsite	$F_{23,Ed}/3$	$F_{23,Ed}/11$

Load direction F_4 or F_5 :

WALCO floor angle	Load per bolt or metal anchor perpendicular to bend line $F_{b,v,Ed\perp}$
L 200x4	$F_{23,Ed}/2$
T 420x4	$F_{23,Ed}/3$
L 200x4 onsite	$F_{23,Ed}/2$
T 420x4 onsite	$F_{23,Ed}/3$

B.3 Connection stiffness

The following slip moduli K_{ser} are to be used for Knapp Clip Connectors joints:

Load direction F1

Knapp Clip Connectors GIGANT:	$K_{ser} = 8,0 \text{ kN/mm}$
Knapp Clip Connectors RICON L/40:	$K_{ser} = 12,0 \text{ kN/mm}$
Knapp Clip Connectors RICON L/30:	$K_{ser} = 6,0 \text{ kN/mm}$
Knapp Clip Connectors RICON L/25:	$K_{ser} = 5,0 \text{ kN/mm}$
Knapp Clip Connectors RICON 66/16 and 70/20:	$K_{ser} = 5,0 \text{ kN/mm}$
Knapp Clip Connectors RICON S:	$K_{ser} = 25,0 \text{ kN/mm}$
Knapp Clip Connectors WALCO V with collar screw:	$K_{ser} = 4,0 \text{ kN/mm}$
Knapp Clip Connectors WALCO V with base plate:	$K_{ser} = 12,0 \text{ kN/mm}$
Knapp Hold Downs WALCO L T:	$K_{ser} = 4,0 \text{ kN/mm}$

Load directions F₂, F₃ or F₄₅

For a central load parallel to the plane of the connector plates, the slip modulus for joints with Knapp Clip Connectors may be calculated as:

Knapp Clip Connectors GIGANT, RICON and RICON S:

$$K_{ser} = 0,02 \cdot \sum_{i=1}^n \rho_m^{1,5} \cdot d_i^{0,8} \quad (\text{B.3.1})$$

Where:

ρ_m The lower value of the mean density of the joist or header;

n Number of screws in the joist or header connection;

d_i Outer thread diameter;

Knapp Clip Connectors WALCO V with collar screw in timber members: $K_{ser} = 1,0 \text{ kN/mm}$

Knapp Clip Connectors WALCO V with collar screw in Magnum Board members: $K_{ser} = 3,0 \text{ kN/mm}$

Knapp Clip Connectors WALCO V with base plate: $K_{ser} = \frac{F_{Rk}}{4,5 \text{ mm}}$

For an eccentric load parallel to the plane of the connector plates, the slip modulus for joints with Knapp Clip Connectors GIGANT, RICON and RICON S may be calculated as:

Knapp Clip Connectors GIGANT:	$K_{ser} = 1,0 \text{ kN/mm}$
Knapp Clip Connectors RICON L/30 and L/40 without reinforcing plate:	$K_{ser} = 1,0 \text{ kN/mm}$
Knapp Clip Connectors RICON L/25 without reinforcing plate:	$K_{ser} = 0,5 \text{ kN/mm}$
Knapp Clip Connectors RICON 66/16 and 70/20:	$K_{ser} = 0,25 \text{ kN/mm}$
Knapp Clip Connectors RICON with reinforcing plate:	$K_{ser} = 2,5 \text{ kN/mm}$
Knapp Clip Connectors RICON S:	$K_{ser} = 4,0 \text{ kN/mm}$

Load direction F₂₃

Knapp Hold Downs WALCO L T: $K_{ser} = 8,0 \text{ kN/mm}$

Load direction F₄

Knapp Hold Downs WALCO L T: $K_{ser} = 2,0 \text{ kN/mm}$

Load direction F₅

Knapp Hold Downs WALCO L T: $K_{ser} = 3,0 \text{ kN/mm}$

RICON®

Wood-to-wood joint bottom beam

RICON® 30 Series

Minimum cross-section width and connector plate position requirements

Calculation of F_4 for eccentric load for glass thickness ≤ 53 mm: see formular B.1.5.
($e_h \leq 42,5$ mm)

RICON® 40 Series

Minimum cross-section width and connector plate position requirements

Calculation of F_4 for eccentric load for glass thickness ≤ 53 mm: see formular B.1.5.
($e_h \leq 42,5$ mm)

Calculation of F_4 for eccentric load for glass thickness > 53 mm:

$$F_{4, \text{eccentric}} = k_e \cdot F_{4, \text{centric}} \quad k_e = \frac{1}{1 + e \cdot k_{\text{eccentric}}}$$

RICON® S

Eccentric loading

⊗ Centre of gravity of screw pattern

RICON® / RICON® S

Eccentric loading with screwed on reinforcing plate (no alu basic profile)

RICON® / RICON® S

Static system of eccentric loaded RICON® / RICON® S with reinforcing plate:

$$x = (a + L_{\text{RICON}}) - (s + e)$$

$$F_{4,RC,d} = \frac{F_{4,d} \cdot e}{(e + x)}$$

$$F_{4,RICON,d} = \frac{F_{4,d} \cdot x}{(e + x)}$$

t => rabbet depth of the isolated glass unit
s => distance to the RICON / RICON S centroid

RICON® / RICON® S**Static calculation of eccentric loaded RICON® / RICON® S with reinforcing plate:**

Calculation of the reaction $F_{4,RC,d}$ and $F_{4,RICON,d}$:

$$F_{4,RC,d} = \frac{F_{4,d} \cdot e}{(e + x)} \quad ; \quad F_{4,RICON,d} = \frac{F_{4,d} \cdot x}{(e + x)} \quad (\text{load } F_1 \text{ is similar calculated})$$

$$x = (a + L_{RICON}) - (s + e)$$

Structural analysis RICON / RICON S connector:

$$\left(\frac{F_{4,RICON,d}}{F_{45,Rd}} \right) \leq 1,0 \quad \text{RICON / RICON S design value } F_{45,Rd} \text{ with } e_{45} = 0$$

Structural analysis reinforcing plate screwing:

$$\left(\frac{F_{4,RC,d}}{n_{ef} \cdot F_{v,Rd}} \right) \leq 1,0 \quad n_{ef} = n^{0,9}$$

$$F_{v,Rd} = \frac{k_{mod}}{\gamma_M} \cdot \min \left\{ \begin{array}{l} 0,4 \cdot f_{h,k} \cdot l_{ef} \cdot d \\ 1,15 \cdot \sqrt{2 \cdot M_{y,Rk} \cdot f_{h,k} \cdot d} + \frac{F_{ax,Rk}}{4} \end{array} \right.$$

$$f_{h,k} = 0,082 \cdot \rho_k \cdot d^{-0,3}$$

$M_{y,Rk}$ (see DoP of screws with ETA, EN14592)

$$F_{ax,Rk} = n \cdot f_{ax,k} \cdot k_{ax} \cdot d \cdot l_{ef} \cdot \left(\frac{\rho_k}{\rho_a} \right)^{0,8} \quad ; \quad n=1; k_{ax}=1,0 \text{ at } 45^\circ - 90^\circ; l_{ef} = L_{screw} - t_{RC}$$

$$\sigma_a = 350 \text{ kg/m}^3; f_{ax,k} \text{ (screws with ETA)}$$

Structural analysis of the reinforcing plate in section A-A (page 144):

$$\frac{\sigma_d}{R_{p,02,d}} = \frac{\frac{F_{res,d}}{A_n}}{R_{p,02,d}} \leq 1,0$$

$$F_{res,d} = \sqrt{F_{1,RC,d}^2 + F_{4,RC,d}^2} \quad ;$$

$$A_n = (b_{RC} - n \cdot d_K) \cdot t_{RC}$$

Structural analysis of RICON/ RICON S connection:

$$\left(\frac{F_{1,RICON,d}}{F_{1,Rd}} \right)^2 + \left(\frac{F_{2,d}}{F_{2,Rd}} \right)^2 + \left(\frac{F_{4,RICON,d}}{F_{4,Rd}} \right)^2 \leq 1,0 \text{ and } \left(\frac{F_{3,d}}{F_{3,Rd}} \right) \leq 1,0$$
